

tenacio joins Innovators' Network at American Heart Association Center for Health Technology & Innovation

Berlin/New York, 14 May 2024

American Heart Association consortium advances development of evidence-based health tech solutions

tenacio, a leading provider of Clinical Decision Support Tools to better manage patients with cardiovascular diseases, has joined the American Heart Association Center for Health Technology & Innovation's (the Center) Innovators' Network. The Center is focused on building and fostering health technology relationships to develop innovative and scalable solutions.

The Innovators' Network is a health care technology consortium that connects entrepreneurs, providers, researchers and payers. Innovators' Network members also have access to the Association's digital guidelines, recommendations, and best-in-class science as they develop digital healthcare technologies. Members collaborate with the Center in different ways, including the building of models for clinical outcome studies, lowering the significant cost of developing those studies independently, helping connect the science to technology, and providing evidence that a digital platform improves healthcare outcomes – a key concern for providers and payers.

"The Center aims to advance the rapid, efficient, and effective development of healthcare technology," said Robert A. Harrington, M.D., FAHA, volunteer past president of the American Heart Association (2019-2020), chair of the American Heart Association's Health Tech Advisory Group for the Center and the Stephen and Suzanne Weiss Dean of Weill Cornell Medicine and provost for medical affairs of Cornell University. "Joining the Innovators' Network gives members the opportunity to leverage the consortium and work toward broadening and deepening their engagement in this arena."

"We are excited to join the American Heart Association's® Innovators' Network, as it will provide opportunities to connect with others innovating in the health tech space as we pursue our goal of helping people with cardiovascular diseases to receive optimized care and to avoid outcome events like stroke, myocardial infarction, and premature death. It enables us to accelerate the development of evidence-based,

digital health solutions aimed at improving outcomes for patients.” says Georg van Husen, M.D., co-founder & CEO of tenacio.

About tenacio

tenacio joins the Innovators' Network bringing with them OptiCor®, an innovative Clinical Decision Support Tool for better managing patients with cardiovascular diseases.

tenacio is a pioneering healthcare technology company focused on revolutionizing cardiovascular care through innovation and evidence-based solutions. Our flagship product, OptiCor®, is a cutting-edge Clinical Decision Support Software designed to optimize treatment decisions for atrial fibrillation (AF) and other cardiovascular diseases. With a validated risk prediction algorithm and seamless integration with clinical guidelines, OptiCor® empowers healthcare professionals to make informed, personalized decisions, leading to improved patient outcomes. Backed by a team of experienced physicians, strategic collaborations with leading institutions, and a commitment to excellence, tenacio is poised to lead the transformation of cardiovascular care and deliver significant value to patients, providers, and investors alike.
